**Winter Performance**

**INTRODUCING INSULATION INNOVATION**

**SOLARCORE™**

NASA-INSPIRED INSULATION TECHNOLOGY

---

**TRADITIONAL INSULATION**

Air pockets between insulation fibers hold heat to keep you warm

---

**SOLARCORE™ INSULATION**

Air pockets inside microscopic aerogel crystals trap heat to keep you warm

---

Compression affects the ability of this insulation to retain heat

---

Compression does not affect Solarcore’s ability to retain heat – keeping you warmer

---

**Solarcore™** is the newest innovation in insulation technology. Solarcore is constructed with aerogel, a synthetic material composed of over 90% air that provides a lighter and thinner insulation with the lowest thermal conductivity of any solid. Instead of bulky down or synthetic fibers Solarcore’s aerogel technology uses self-contained, microscopic air pockets that trap air and deliver superior performance up to 270% warmer than the leading insulation.

**SOLARCORE™**

NASA-INSPIRED INSULATION TECHNOLOGY
